

Board Converting News Internet Directory

Kiwiplan www.kiwiplan.com

Kiwiplan - premier worldwide software provider of enterprise-wide, fully automatic solutions specifically for the corrugating and packaging industries. Kiwiplan's Total Solution delivers comprehensive, seamless real-time flow of information from sales order management to dynamic total plant scheduling and inventory control through shipping.

Linear Products, Inc., An H.B. Fuller company www.hbfuller.com/linearproducts

Manufacturer of SESAME® Tape, SESAME® Tape Plus, OPEN-SESAME® and RPT®, the complete line of hot melt coated tape and string for reinforcement and easy-open packaging solutions.

Michelman Coatings www.expandingpaper.com

Descriptions of Michelman repulpable, waterbased coatings for corrugated and paperboard. Includes photos and descriptions of coating application equipment.

Murph Haines, Inc www.MurphHainesInc.com

Specializing in manufacturing, rebuilding, retrofitting and upgrading corrugating machinery. Our website features a fingerless singlefacer conversion, Nobull 1 Bull gear replacement drive, servo shear, web diverter table, glue machine and triplex upgrades.

Pacess www.pacessglobal.com

Pacess is a global packaging solutions provider. We connect paper mills, converters and packaging users through comprehensive solutions-based programs. Visit our interactive website today and get connected.

Pamarco Global Graphics, Inc. www.pamarcoglobal.com

Originators and innovators in anilox roll technology. The world's leading supplier of precision laser and machine engraved rolls, including Fiberlyte carbon fiber weighing 90% less than steel. Pamarco draws upon its global resources of leading-edge technical knowledge to devise integrated business solutions for the board converting and flexographic industries. Offers unprecedented added value through its "Customer First" program, including dedicated technical, operational and management support designed to increase quality, productivity and competitiveness.

PaperExchange.com www.paperexchange.com

The Paper Industry's internet marketplace to buy, sell, trade and ship containerboard. We facilitate on-line negotiations between manufacturers, converters and brokers.

create two new full time sales territories both in Canada and the Bay Area of California in order to support our customers in those areas. PGG has also increased staffing in its Technical Services Division, which was a positive requirement due to increased integrated national account sales.

"In early 2001, Pamarco Global Graphics will launch its Pamarco Care anilox and plate cleaning products. After two years of steady research PGG will proudly unveil cleaning products that are completely safe for all anilox roll surfaces and completely environmentally safe as well. It is exciting to have a product with absolutely no restrictions on it that works better than anything we have tested. These cleaning products will become an integral part of PGG's comprehensive anilox roll audit program, which is designed to keep rolls running at optimum performance levels." Call (908) 241-1200.

Ringwood

Bedford Park, Illinois: Bob Lantz reports, "The year 2000 was the most exciting, innovative year in the history of our

company. Ringwood introduced the RS-360, the new world standard in starch adhesive mixing system. This modular system was developed in conjunction with our international partners over a three-year period using input from customers around the globe. The RS-360 incorporates the most advanced features from our earlier systems along with a significant number of new features.

"The RS-360 concept is simple. A boxplant installs the RS-360 base unit, then, if necessary, adds options to meet their specific needs. It's all driven by Starchware, our proprietary software written specifically for use in corrugated boxplants. This intuitive, menu-driven software is quick to learn and makes it easy for plant personnel to understand and implement the system's advanced features. Starchware includes advanced reporting and other high-level computer functions necessary in starch adhesive production, functions that are not available in pre-packaged industrial control software.

"With the RS-360, we've taken years of experience and developed a truly global system that works equally well with starches of all kinds...from triplewall, heavyweight plants to high-speed micro flute corrugators. For plants where fully automatic systems are not an option, our semi-automatic systems are still the adhesive mixing system of choice." Call (800) 624-3677.

Spectra-Kote

Gettysburg, Pennsylvania: Charles Propst reports, "Our company continues to develop new chemicals and coatings for linerboard, folding carton, bag stock, and sandwich wrap. Several folding board mills, linerboard mills, and bag stock mills are in the midst of qualifying our products. Spectra-Guard 3000 and Spectra-Guard 763-A have been successful in obtaining the necessary kit values requested by each mill. The products are applied at the wet end, size

press, and the calendar stacks. Our international patent is described as a 'broad base' patent because it identifies our chemistry in a generic format so that similar chemistries under different brand names can not be used in a similar fashion.

"I am confident that Spectra-Kote will continue to qualify at most mills throughout the world in 2001. The choice of applying this product at the converting side is also another successful way of producing grease protection. Our chemicals and coatings sales continue to grow in sales to mills, corrugators, and converters, as well as consumption internally. We continue to supply precoated and preprinted liners and folding carton needing various random prints, solid colors and functional barriers. Spectra-Kote Corporation has five sales representatives within the company and eleven mill product representatives to service the world demand for our patented products.

"Our NaturePak Corporation division, located in Sheboygan, Wisconsin, has grown since its introduction to the market in last year's report. NaturePak continues to successfully replace Styrofoam and plastic in the food service markets. Putting our first forming machine into full capacity has required the construction of our second machine, which is a design developed exclusively by Spectra-Kote and NaturePak. It will be about three times larger than our first machine. This will give NaturePak the capacity of 750 million square feet per year in the year 2001.

"All of our corrugated sheets have to be purchased, and require one of the Spectra-Guard coatings. The Corru-Tray will give the corrugated industry an opportunity to penetrate the Styrofoam tray and plastic tray markets. At Spectra-Kote and NaturePak we remain the solution for new and existing customers." Call (800) 241-4626.

Systec Conveyors

Indianapolis, Indiana: Richard Harris reports, "In the year 2000, Systec Conveyors saw double digit growth. During this record year, we continued to release new innovative products to the corrugated box industry. These products included our patented Trim Line Conveyor Car (TLC), Stable Load Intermesh Conveyor (SLIC), and B.U.L.L.I.T. sheet counting module, which were displayed at the Atlanta TAPPI/AICC SuperCorrExpo. At this world class event, we were visited by hundreds of people who were very happy with our products and gave support to our efforts to provide new and innovative ideas to the industry. The SuperCorrExpo 2000 was a huge success for us!

"The patent we received on our Trim Line Conveyor Car (TLC) was a major highlight in the year 2000. The TLC car is a powered conveyor car for load movement between stationary conveyors in manual or automatic operation.
