Spectra-kote[®]
CORPORATION

Over the years, you've come to know Spectra-kote as the premier manufacturer and supplier of printed color, coated and functional liner. Our manufacturing capacity of more than 360 tons daily and our shipping network enable us to efficiently serve both the North American and European continents. During the last half-century, our Spectra-kote, Spectra-guard and Spectra-print brand names have become synonymous with the world's finest coated and colored linerboard.

What has been difficult to share with you because of its proprietary nature, is our ability to accomplish your individual and very specific requests for highly specialized and innovative product. Additionally, we have developed functional, barrier coated and environmentally safe products that we expect will literally change the way hundreds of industries will do business.

Spectra-kote stands by its growing reputation for ingenuity, craftsmanship and commitment. We are ready to apply our research, skills and technology to meet your needs, even if others have attempted and failed in the past to accomplish your specified goals.

We're up to the challenge. Give us a call today.
